

## **Day 2: Introduction to data analytics**

I learned about the field of data analytics and the ways in which it can be used to gain insights and make data-driven decisions. Through learning about various data analysis techniques such as descriptive, diagnostic, predictive, and prescriptive analytics, I have come to understand the importance of data collection, cleaning, and exploration in the process. I also learned about the different tools and technologies available for data analysis such as Excel. I am excited to dive deeper into data analytics and apply my new knowledge to real-world problems.
